

THE FASTEST WAY TO ADVANCE YOUR CAREER IN THE TRADES

***New! Study-At-Home System
that Rapidly Teaches These
In-Demand Trade Skills:***

- **Plumbing**
- **Electrical**
- **Carpentry**
- **Masonry**
- **Welding**
- **Locksmithing**
- **Machining**

***Become a Multi-Trade Technician, Facilities
Maintenance Technician, or Trade Assistant to
Plumbers, Electricians, Carpenters and More!***

SECURE YOUR FUTURE WITH SKILLS THAT ARE IN HIGH DEMAND

I would like to introduce you to what could be the most rewarding adventure of your life... a unique process where you will acquire the knowledge of one or more trades in a matter of weeks or months and if you choose, even become a Multi-Trade Technician (MTT), Facilities Maintenance Technician (FMT), or assistant trade technician with a vocational certificate from ATTI.

What would it take for you to get a better job, for more pay? **Know how.** Whether you are just starting your career in the trades, or want to add to your know-how to get more pay or a better job, ATTI has a course right for your individual goals. Why not FAST-START or FAST-ADVANCE your career in the trades?

Join us and learn multiple trades and you will be among an elite and growing group of individuals who can build or repair almost anything. Or get trained in one trade and fast-start your trade career. Knowing how to do the work of one or more trades, you will have confidence in the work you take on, knowing that you will be able to do more trade tasks and get or create jobs in almost any economic environment.

Learning a growing number of trades, as you "build your resume" to be in high demand, could be one of the most important decisions of your entire career. Now, more than ever, your individual decision to learn these trades combined with persistence and determination, will give you the opportunity to achieve job security, meaningful employment, and job satisfaction.

In the past, individuals typically learned by watching skilled tradesmen performing the tasks "on the job." On-the-job training can be spotty at best, one task here another there. Relying on that method, it could take you years to gain the knowledge you need. Plus, the tradesman and/or supervisor demonstrating the work may not be skilled at teaching. In contrast, by providing our students with consistent, high-level step-by-step video instruction, verifying they have acquired that trade knowledge, we bring tremendous value to students and employers.

In this brochure you are going to discover the training you will receive when you enroll in any of our courses, and how you can rapidly learn one or more of these valuable trade skills: Plumbing, Locksmithing, Carpentry, Masonry, Machine Shop, Electrical and Welding.

With determination and by spending as little as 2 hours a day watching video, you can complete the entire course in as little as 6 months. Ask to speak with an ATTI Enrollment Advisor and see our School Catalog for complete details on all our courses. Now is the time to get started!

Gene Kelly

Accelerated Technical Training Institute (ATTI)

Accelerated Technical Training Institute (ATTI) MISSION AND OBJECTIVES

Our mission, as the premier provider of accelerated instruction in the mechanical and construction trades, is to provide individuals with the opportunity to gain the knowledge of various trade skills necessary to get a job, start a business, or become self-reliant through studying our proprietary training system.

We are radically changing the way trade education is delivered and experienced, providing study-at-home courses that make a real difference in the lives of our students.

Our courses provide a broad education in trade theory, so students are highly knowledgeable prior to entering the job market in any number of positions categorized under the classification of General Maintenance and Repair (SOC Code 49-9071) and similar classifications. These jobs include

such titles as; building maintenance technician, maintenance mechanic, facilities maintenance technician, plumbing assistant, electrical assistant and so much more. This occupational classification requires skills in any two or more trades such as carpentry, plumbing, electrical, locksmithing and more.

ATTI graduates are significantly better candidates for entry-level work, and for advancing within an organization as a valuable employee. They bring to the job the knowledge base to build upon to do a multitude of hands on tasks as they quickly advance in their career.

Our curriculum is taught by highly qualified trade instructors with decades of real-world experience, to ensure students receive relevant, high-level instruction.

ATTI is registered with the Idaho State Board of Education as a private proprietary school in the State of Idaho under Title 33, Chapter 24, Idaho Code.

INTRODUCING A NEW CLASS OF TRADESMAN...

STUDY AT HOME TO LEARN TRADE SKILLS FOR TODAY'S JOB MARKET

Experience revolutionary programs that put YOU in control of your future with training that fits the needs of the current job market: ATTI's Multi-Trade Technician (MTT), Facilities Maintenance Technician (FMT) and individual trade certificate courses. Whether you know most everything about a trade or are just learning our knowledge-based curriculum will enable you to enter a trade or maintenance career or advance in your current maintenance job, rapidly.

Demand for trade labor is on the rise and, in particular, maintenance jobs requiring multiple trades. Many employers need employees that can fill multiple job roles. Instead of having an electrician, a plumber, and a carpenter on staff, they want one person who can do it all. They want people skilled in multiple trades that can make, fix, or repair almost anything.

ATTI's accelerated learning process, utilizes study-at-home video instruction to rapidly teach you seven (7) of the most in-demand trades: Plumbing, Locksmithing, Carpentry, Masonry, Electrical, Welding and Machine Shop.

It is a one-of-a-kind learning experience designed to produce highly-trained, self-reliant individuals faster and with greater confidence than any other trade course.

By studying as little as One to Two hours per day, in just 6-12 months you can gain knowledge of all Seven (7) Trades and receive up to 8 individual certificates.

HOW A “LIBERAL ARTS EDUCATION” IN THE SKILLED TRADES PROVIDES YOU THE KNOWLEDGE YOU NEED TO BECOME SUCCESSFUL IN THE WORKPLACE AND IN LIFE:

In general, the more knowledge you acquire, the more capable you are in business and in life. The broad scope of the Multi-Trade Technician (MTT) and Facilities Maintenance Technician (FMT) programs, coupled with extensive “real-world” life experiences shared by the instructors, provides you with a “Birds eye view” of a project or job allowing you to better analyze problems or systems, and apply the multiple trade skills necessary to create a solution.

As a Multi-Trade Technician (MTT or FMT), in addition to the technical knowledge within each of the 7 trades, you will also learn general leadership, critical thinking, and communications skills which are commonly part of a “liberal arts education” and often referred to as “employability” or “soft skills.” Employers demand these skills because with them you can solve real-world problems better and faster, with less wasted time and resources, while leading better working relationships. You will also learn the following “Liberal Arts Skills” as applied to the Trades:

- **Analysis**—the ability to examine a situation or problem from many angles.
- **Communication**—the ability to organize ideas and facts, and clearly present them in a manner that is common in the skilled technician’s workplace.
- **Leadership**—the ability to visualize what needs to be done and to direct, guide, and lead by example.
- **Managing qualitative information**—identifying, categorizing, tracking, and retrieving documents, diagrams, and maintaining the associations between them.
- **Planning and organizing**—the ability to envision and manage work, to anticipate events, track progress, and to estimate time-frames.
- **Research**—to examine new ideas and approaches to a problem, develop plans, investigate causes of problems, and more.
- **Systemic thinking**—the ability to evaluate situations or problems, and be able to recognize or anticipate what will happen when one part changes, and how it effects the rest of the system or process.

This trade knowledge is what will make you stand out from the crowd and be a desirable employee.

ACHIEVE PERSONAL SUCCESS WITH THE MOST IN-DEMAND JOB SKILLS

MULTI-TRADE TECHNICIAN (MTT)

- PLUMBING • ELECTRICAL • CARPENTRY • MASONRY
- WELDING • MACHINE SHOP • LOCKSMITHING

This knowledge-based Multi-Trade Technician (MTT) Course is an accelerated method of learning multiple trades for the increasing number of maintenance jobs demanding know-how from multiple construction and mechanical trades.

With seven (7) complete trade courses in one, the exclusive and broad-based curriculum of the MTT Course prepares students to begin their maintenance career; or to work in entry-level trade assistant jobs in: plumbing, locksmithing, carpentry, masonry, welding, machine shop and/or electrical.

The MTT course prepares individuals for entry-level employment classified as General Maintenance and Repair (SOC 49-9071 US Department of Labor).

This course is not intended to lead to becoming a Licensed Plumber, Electrician, and/or Contractor, nor is it intended to lead to becoming a Certified Welder.

Course includes:

- 141 Instruction Hours; 352.5 Study Hours
- Self-paced—completed within 6 to 12 Months
- No Prerequisites
- 8 Certificates awarded upon completion: Plumbing Theory, Locksmithing Theory, Carpentry Theory, Masonry Theory, Electrician Theory, Welding Theory, Machine Shop Theory and Multi-Trade Technician Theory.
- Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment.

FACILITIES MAINTENANCE TECHNICIAN (FMT)

- PLUMBING • ELECTRICAL • CARPENTRY

The knowledge-based Facilities Maintenance Technician Course is an accelerated method of learning multiple trades for the increasing number of maintenance jobs involving skills in more than a single trade. With three complete trade courses in one program of study, the exclusive and broad-based curriculum of the Facilities Maintenance Technician Course enables students to begin their maintenance career; or in entry-level single-trade assistant jobs in, plumbing, carpentry and/or electrical. Three complete courses in one program of study. The Facilities Maintenance Technician (FMT) course prepares individuals for entry-level employment classified as General Maintenance and Repair (SOC 49-9071 US Department of Labor).

This course is NOT intended to lead to becoming a Licensed Plumber, Electrician, and/or Contractor.

Course includes:

- 61 Instruction Hours; 152.5 Study Hours
- Self-paced—completed within 3 to 12 Months
- No Prerequisites
- 4 Certificates awarded upon completion
- Distance education—delivered by video instruction with instructor support available by email or phone.
- Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

CURRICULUM

Our curriculum is taught by highly qualified trade instructors with vast real-world experience, and delivered on video through our distance education, study-at-home courses. Students receive relevant, high-level knowledge based instruction in each course we offer. (To see the general curriculum for each of the trade courses included in the MTT and FMT Courses, refer to each of the individual trade course descriptions included in this brochure. A detailed course syllabus is available or by request.)

MONEY-BACK GUARANTEE—TAKE UP TO A FULL YEAR TO EXPERIENCE OUR COURSES!

We believe so completely in this program and that you will benefit from it that we offer this Guarantee: If you are not 100% satisfied with any course, you may withdraw from the course at any time and receive a full refund for up to **one full year** after the date of enrollment, if no certificate exams have been passed, thus having received the benefit of that course/certificate (e.g. plumbing certificate). If you have taken and passed one or more certificate exams, you can withdraw from the course at any time during the enrollment period and receive a pro-rated refund. The refund will be less a registration or administration fee not to exceed \$50.00 and less any deduction for books and materials not returned in good condition and will be issued within 45 days of withdrawal.

WHAT OUR STUDENTS SAY ABOUT THE MTT COURSE

"I love the empowering effect of the training...knowing I can fix anything! I started with plumbing because I had a plumbing problem in my house. And I fixed it! Something simple I had paid a plumber good money to do."

Bob Sellers, Computer Programmer, Ava, Montana

"With the MTT Program I am looking to expand my ability to maintain my independence."

Darin Whitaker, Farmer, Easton, Illinois

"One of the disappointments I've had with the methods of education I received in the past is you are compelled to learn things with no thought to how you might apply it in real life. The MTT program follows a logical progression of skills development you can readily apply to the real world."

Tom Alt, Retiree High-Tech Sector, Cusseta, Georgia

"I like the convenience and flexibility of MTT. I choose when, how much and how fast to learn."

Michael Tillman, Nevada, Iowa

FAST-START OR ADVANCE YOUR TRADE CAREER WITH THESE SINGLE COURSES

Plumbing

This knowledge-based Plumbing Course teaches the A–Z of the plumbing trade and is taught by a licensed plumbing instructor, rapidly preparing students for entry-level work in plumbing.

Receive consistent, high-level instruction in everything related to plumbing in topics such as tools, safety, the Uniform Plumbing Code (UPC), all major systems and subsystems such as: drain, waste and vent, toilets, laves, tubs, fixtures, water heaters, commercial grease traps and so much more! You'll learn the rough-in, top-out and installation of all new construction plumbing, as well as basic plumbing repair and maintenance.

The Plumbing Course prepares individuals for entry-level employment in positions involving Plumbing Assistance (*SOC 49-3015, Helpers-Pipelayers, Plumbers, Pipefitters, Steamfitters, US Department of Labor*) and entry-level and exempt plumbing work classified as General Maintenance and Repair (*SOC 49-9071 US Department of Labor*).

Includes Instruction in:

- History, Safety, Tools, Plan Reading
- Plumbing Systems and Subsystems
- Cutting, Installation, Testing, Service & Repair
- Drain, Waste & Vent (DWV) Systems
- Gas, Fire Sprinklers, Water Heaters and More!

This course is not intended to lead to becoming a licensed plumber. Course includes: 30 Instruction Hours • 75 Study Hours • Self-paced—completed within 1 to 12 Months • No Prerequisites • Certificate in Plumbing Theory • Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

Call 1-800-775-5753

"Thrilled with your MTT program! I even have my 11 year old son watching with me and he'll get certified when he is ready."

Ladd Stokes, Horseshoer, Temecula, California

"Compared to traditional classroom training, the self-pace and excellent video images lead to better learning. The video (especially close ups) provide views unavailable in classrooms, and the ability to review at any time is a big advantage."

Brian McCarthy, Grand Rapids, Michigan

Locksmithing

This knowledge-based Locksmithing Course teaches the locksmithing trade in meticulous detail. Receive consistent high-level instruction in all aspects of locksmithing. Students will learn from a licensed professional locksmithing instructor everything from antique and collectible locks to cutting keys, re-keying and picking locks, installing commercial and residential lock sets and so much more. Students will see up close views of the instruction so they can quickly learn the fine detail of such precision work as re-pinning and picking locks.

The Locksmithing Course prepares individuals for entry-level employment as a Locksmith (*SOC 49-9094 US Department of Labor*) or entry-level locksmithing classified as General Maintenance and Repair (*SOC 49-9071, US Department of Labor*).

Includes Instruction in:

- Keys: including various key types and key cutting.
- Locksmithing Basics: covers all types of door locks, padlocks and more.
- Residential Locksmithing: including the installation and repair of major door lock brands.
- Commercial Locksmithing: including master key systems and decoding.
- Impressing—Picking and Installing Locks

Registration and state-issued license may be required for locksmiths in states other than Idaho. Individuals who have been convicted of any crime will not be issued a registration in some states. Course includes: 19 Instruction Hours • 47.5 Study Hours • Self-paced—completed within 1 to 12 Months • No Prerequisites • Certificate in Locksmithing Theory • Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

"I would highly recommend the MTT Program to anyone. Even if you choose not to pursue a career in any of the fields, this knowledge can still be extremely valuable. If you know carpentry, plumbing, masonry, electrical and locksmithing, what could you not do around your own home? Add in welding and machine shop, and there is no end to the projects you could tackle."

Frank Mosblech, Mt. Airy, North Carolina

Carpentry

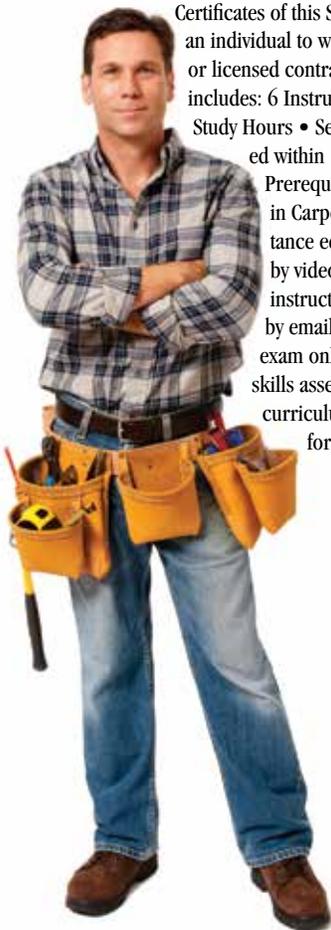

This knowledge-based Carpentry Course teaches the basics of the rough and finish carpentry trade with many insider tips from licensed contractors with decades of experience in the field. Students will identify many of the tools of the carpentry trade as they learn how to construct floor, wall, ceiling, and roof assemblies, install doors, windows, drywall, trim and kitchen cabinets from the pros.

The Carpentry Course prepares individuals for entry-level employment in positions involving rough and finish carpentry such as Carpenter's Helper, Drywall Installer, Framer, and Construction Trades Helper and for entry-level rough and finish carpentry work classified as General Maintenance and Repair (SOC 49-9071 US Department of Labor).

Includes Instruction in:

- Framing Floors, Walls, Roofs
- Thermal and Moisture Protection
- Drywall—Hanging and Taping
- Installing Trim
- Installing Doors and Windows
- Installing Kitchen Cabinets and Countertops

Certificates of this School do not qualify an individual to work as a registered or licensed contractor. Course includes: 6 Instruction Hours • 15 Study Hours • Self-paced—completed within 1 to 12 Months • No Prerequisites • Certificate in Carpentry Theory • Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

Machine Shop

This knowledge-based Machine Shop Course comes in 3 modules and covers the A–Z of manual machining, the lathe, vertical milling machine and general machine shop techniques:

Lathe: Detailed instruction on the set-up and operation of the lathe. Students learn how to turn, bore, thread, knurl, taper and make precision parts.

The Vertical Milling Machine:

Video instruction detailing everything the student needs to know

about how to set-up and operate a vertical mill including; fly cutting, indexing, boring, milling aluminum, steel and plastics, clamping, fixturing, and digital read-out.

General Machine Shop Techniques: Students learn how to properly operate all the support equipment needed in a shop: precision measuring tools, belt sanders, bead blasters, grinders and surface grinders, plus learn how to sharpen drill bits, remove broken screws. Detailed shop planning and set-up, and advanced equipment and techniques is also covered.

The Machine Shop Course prepares an individual for entry-level apprentice employment in the machining trade (SOC 51-4041 Machinists [entry-level/apprentice]) and for entry-level machine shop work classified as General Maintenance and Repair (SOC 49-9071 US Department of Labor).

Certificates of this institute do not qualify an individual to work as a registered or licensed contractor. Course includes: 29 Instruction Hours • 72.5 Study Hours • Self-paced—completed within 1 to 12 Months • No Prerequisites • Certificate in Machine Shop Theory • Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

Electrical

This knowledge-based Electrical Course teaches all aspects of the electrical trade. Learn everything from electrical theory and the National Electrical Code® to blueprint reading, residential wiring, electronic control systems, motors and much more. Foundational principles of electricity, such as electric current, Ohm's

Law, and circuits are explained in detail.

Students learn the tools of the trade, and critical safety procedures. How to install the residential electrical components are demonstrated, including such items as device boxes, raceways and fittings, fasteners and anchors, conductors and cables and more. The Electrical Course prepares individuals for entry-level

employment in such positions as Maintenance Electrician, Electrician Assistance (SOC 47-3013 Helpers-Electricians) and for entry-level and exempt electrical work classified as General Maintenance and Repair (SOC 49-9071 US Department of Labor).

Includes Instruction in:

- Electrical Safety and Tools
- Electrical Theory and Calculations

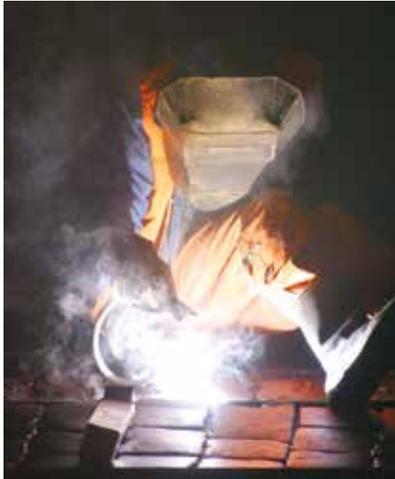

- Motors: Theory and Application
- Residential Wiring
- Trouble Shooting and Repair

This course is *not* intended to lead to becoming a licensed electrician. Course includes: 25 Instruction Hours • 62.5 Study Hours • Self-paced—completed within 1 to 12 Months • No Prerequisites • Certificate in Electrician Theory • Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

Call 1-800-775-5753

Welding

This knowledge-based course includes every type of welding from gas to ARC and TIG welding. Learn through demonstration, with up close views of the instruction so you can quickly learn the fine detail of such precision work as how to hold the welding equipment, puddling, cutting and more in virtually every type of welding

operation. Also learn welding safety, tank set up, how to do every type of weld in 2G, 3G and 4G positions. The Welding Course prepares individuals for entry-level apprentice employment in the welding trade in positions classified under Welder (*SOC 51-4121 US Department of Labor*) and for positions involving entry-level welding work classified as General Maintenance and Repair (*SOC 49-9071 US Department of Labor*).

Instruction Included:

- Welding Safety
- Gas Welding: including tanks, joints, setup, and cutting tips
- Arc Welding: covers electric arc, and MIG welding, welding rods, whip-out, arc gap and much more
- TIG Welding: covers TIG welding of steel, stainless steel, and aluminum and more
- Metal cutting, gas, and plasma
- Shop set-up, projects and fabrication techniques

Certificates of this School do not qualify an individual to work as a registered or licensed contractor, nor do they qualify as welding certification. Course includes: 22 Instruction Hours • 55 Study Hours • Self-paced—completed within 1 to 12 Months • No Prerequisites • Certificate in Welding Theory • Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

Masonry

This knowledge-based Masonry Course teaches the basics of the masonry and tiling trades. Students will learn from a professional brick mason and tile setter currently working in the field, how to build a block wall, a brick wall, brick paving designs, brick walkway and planter box repair; as well as setting tile on floors, countertops and walls.

The Masonry Course prepares an individual for entry-level employment in the masonry and tiling trade in positions such as Mason's Helper, and Assistant Tile Setter (*SOC 47-3011 Helpers—Brickmasons, Blockmasons, Stonemasons, and Tile and Marble Setters, US Department of Labor*) and for entry-level positions that involve masonry and tile work classified as General Maintenance and Repair Technician (*SOC 49-9071 US Department of Labor*).

Instruction Includes:

- Building Block Walls
- Building Brick Walls
- Brick Paving Designs
- Brick Paving Repairs
- Tiling Walls
- Tiling Countertops
- Tiling Floors
- Concrete Driveways and Sidewalks

Certificates of this School do not qualify an individual to work as a registered or licensed contractor. Course includes: 10 Instruction Hours • 25 Study Hours • Self-paced—completed within 1 to 12 Months • No Prerequisites • Certificate in Masonry Theory • Distance education—delivered by video instruction with instructor support available by email or phone. Online exam only—no hands-on skills assessment. For entire curriculum, ask your advisor for a course syllabus.

BONUS! Optional Textbook Study

For students who want to go the extra mile, several of our individual courses offer optional textbook study and quizzes. In addition, the MTT and FMT courses include a 30-hour optional study segment entitled, "Core Curriculum." Students have the opportunity to dig in even deeper on trade topics common to every trade giving students even more knowledge to be successful in a diverse construction work environments. While not required, these study segments are recommended to round out a student's knowledge and better prepare them to obtain a job. Includes study materials and quizzes in:

- Basic Safety
- Introduction to Construction Math
- Introduction to Hand Tools
- Introduction to Power Tools
- Introduction to Construction Drawings
- Basic Communication Skills
- Basic Employability Skills
- Introduction to Materials Handling

Bonus Instructional Material: CAREER ADVANTAGE SERIES: STRATEGIES FOR SUCCESS

In this 29-part online series, students are guided through the creation of a personal profile including: Career and Educational Exploration, and Career Planning and Implementation. They are given the opportunity to prepare a step-by-step work search strategy based on their personal background, life goals, and current and potential skills. This is a powerful set of tools for navigating a successful future. No testing is required in the Career Advantage Series. Viewing the informational content included in the series is beneficial, but optional and not required in order to receive your MTT certificate.

In this series students will learn how to:

- Set Goals and Action Plans
- Become What Employers Want Most
- Overcome Barriers to Employment
- Prepare Resumes That Get Results
- Perform Top Interviewing Strategies
- Succeed on Your New Job

This course was designed according to National Occupational Information Coordinating Committee (NOICC) Guidelines and is recommended by the National Employment Counseling Association (NECA).

THE MOST COMPLETE MULTI-TRADE COURSE AVAILABLE ANYWHERE!

The Multi-Trade Technician (MTT) Course (shown here) comes complete with video instruction on DVD, reference books, study guides, testing, and certificate awarded upon successful completion of the course.

CALL 1-800-775-5753 and speak to a Student Advisor to learn about how you can earn your certificate in one or more trades.

ATTI is registered with the Idaho State Board of Education as a private proprietary school in the State of Idaho under Title 33, Chapter 24, Idaho Code.

This institute's courses do not lead to becoming a licensed plumber, electrician or contractor, nor do they lead to becoming a certified welder. This institute offers courses that lead to skills which can be applied in non-licensed "General Maintenance and Repair" and "Trade Helper" jobs involving one or more of the construction and mechanical trades. General Maintenance and Repair, Standard Occupational Classification (SOC) 49-9071 *US Department of Labor*, is a non-licensed occupational classification as are the trade assistant jobs, including but not limited to: (49-3015, Helpers-Pipelayers, Plumbers, Pipefitters, Steamfitters), 47-3013 (Helpers-Electricians), and 47-3012 (Helpers-Carpenters), 49-9094 (Locksmiths and Safe Repairers [entry-level]), 47-3011 (Helpers--Brickmasons, Blockmasons, Stonemasons, and Tile and Marble Setters) 47-2051 (Cement Masons and Concrete Finishers), 51-4122.00 (Welding, Soldering, and Brazing Machine Setters, Operators, and Tenders [entry-level apprentice]), and/or 51-4041.00 --(Machinists [entry-level apprentice]). For more occupational information on these and related SOC's go to www.onetonline.org. In some states such as Idaho, only employees working on their employer's premises, or individuals working on their own residence, may perform plumbing or electrical work without a Journeyman and Contractor's License. Maintenance employees are prohibited from certain types of plumbing and electrical work without a license. A self-employed individual may not perform any plumbing or electrical work except on their own residence without a Plumbing or Electrical Contractor's License. For more information, go to <http://dbs.idaho.gov>. All independent contractors are required by Idaho law to be registered with the Idaho Contractors Board, which is a division of the State of Idaho, Bureau of Occupational Licenses (<http://ibol.idaho.gov/IBOL/Home.aspx>).
